quick intro chat sometime this or next week work? My calendar: https://meet.getivy.eu/30min Best, Ferdi Hi X, would love to share how Kraken improved their payment & banking setup with Ivy. Do you have 15 minutes to chat this or next week? My calendar: https://meet.getivy.eu/30min Best, Ferdi Hi, Please send me information on your solutions. Hi X, My colleague Ruben will reach out, share more details, and help with the coordination of our call. Best, Ferdi 12 Hi X, Ivy provides a single API for open banking, vIBANs, and on/off-ramps. Customers like Kraken and KuCoin trust us with their payins/payouts because of our superior conversion rates (due to redundancy of payment & banking providers) …

Selecting best approach

→ Draft 2 (fit_mismatch-optimized)

Simon is engaged and open to a call, but his stated needs are card payments and broad APM support for Shopify merchants, including higher-risk verticals, which points to likely fit mismatch with Ivy's crypto/on-off-ramp positioning. Draft 2 is the only reply that directly qualifies against the actual use case instead of prematurely scheduling. It stays transparent, protects time, and still leaves a narrow path open if there is a crypto-related angle.

Calibrating tone against historical patterns

Hi Simon,

Thanks for the context, and no worries at all.

Based on what you described, I should be transparent that Ivy may not be the best fit here. From our side, we focus on banking offerings and stablecoin/fiat on and off-ramps for crypto companies, so if the core need is card payments and a broad set of APMs for Shopify merchants, we are likely not the right provider for that.

If there is a crypto payments, payout, or fiat on/off-ramp angle in your platform that is worth exploring, happy to take a closer look. Otherwise, I do not want to waste your time if the requirement is primarily PSP-style card acquiring.

Best,
Felix

Tiberius API 0.1.0 OAS 3.1

/api/docs

API-first reply-drafting agent for chat-based teams.

Pipeline per `/reply` **call:** hybrid retrieval (HNSW vectors + tsvector FTS, fused via RRF) + metadata-filtered search + entity-triggered lookup → LLM listwise rerank → structured-slot prompt → grounded generation → multi-signal confidence (retrieval coverage + intent confidence + LLM groundedness). Below-threshold drafts return `suggested_tool: "flag_for_review"`.

Auth: every request needs `Authorization: Bearer tib_…`. Keys are either **agent-scope** (created from the agent's API-keys page, can only act on that one agent) or **workspace-scope** (created via `/api/v1/keys`, used by MCP clients that need to span every agent — passes auth for any agent id).

Response envelope: all responses are `{ data, error }`. On success `error` is `null`; on failure `data` is `null` and `error` is `{ code, message, details? }`.

In deinem Tiberius-Workspace ist aktuell ein Agent:

Ivy Sales Pre-Discovery – entwirft Antworten für eingehende WhatsApp-/Telegram-Sales-Nachrichten in der Pre-Discovery-Phase. Wissensbasis: 7/7 Dateien ready, 28 Chunks, 1 Ordner.

was steht in dem agent über unser pricing?

Agent verifizierten Mangel an Pricing-Informationen >

Kurze Antwort: **zum Pricing ist nichts Belastbares hinterlegt.**

Ich habe den Agent direkt gefragt und er hat die Anfrage explizit zum Review geflaggt mit der Begründung *"no verified pricing information is available in the provided knowledge base"*. Seine Default-Antwort in dem Fall ist, höflich auszuweichen, nach Use Case / Markt zu fragen und das intern abzuklären.

Falls du möchtest, kann ich dir die Wissensdate des Agents auflisten, damit du siehst, wo du eine Pricing-SOP oder FAQ ergänzen könntest.
